

SYSTEM OVERVIEW

Conversion-focused lawn booking system using visual yard sizing, condition-based pricing, and optional smart auto-detection.

FRONTEND COMPONENT (React Logic)

- Step 1: Select Service (Mowing, Trim, Cleanup, Full Service) - Step 2: Select Yard Size (Small, Standard, Large, Estate) - Step 3: Select Condition (Clean → Heavy Overgrowth) - Step 4: Show Instant Price + Continue State Example: { service: 'mowing', size: 'medium', condition: 'slight', price: calculated }

SIZE TIERS (USER FRIENDLY)

Small Yard → ~1/8 acre → 0–5k sq ft Standard Yard → ~1/4 acre → 5k–10k sq ft Large Yard → ~1/2 acre → 10k–20k sq ft Estate → 1+ acre → 20k+ sq ft

CONDITION TIERS

Clean = 1.0x Slight = 1.2x Overgrown = 1.5x Heavy = 2.0x

PRICING ENGINE

baseRate = 75 (example) sizeMultiplier = { small: 1.0, medium: 1.4, large: 1.8, xl: 2.5 }
conditionMultiplier = { clean: 1.0, slight: 1.2, overgrown: 1.5, heavy: 2.0 } finalPrice = baseRate * sizeMultiplier * conditionMultiplier

BACKEND API (Express)

POST /api/quote body: { service, size, condition } Returns: { price: number, crew: number, timeEstimate: string }

DATABASE SCHEMA (Postgres / Drizzle)

table: lawn_quotes - id - service - size - condition - price - created_at table: jobs - id - customer_id - quote_id - status - crew_assigned

SMART AUTO-DETECT

User enters address → Use API (Google Places / Zillow / Regrid) → Fetch lot size → Map to size tier → Auto-select UI option

CREW LOGIC

small → 1-2 crew medium → 1-2 crew large → 2-3 crew xl → 2-4 crew

CONVERSION BOOSTERS

- 'Pick what looks closest' - 'We'll adjust if needed' - Instant pricing preview - Visual yard cards
(recommended)
