

JC ON THE MOVE - Current System Blueprint

Snapshot of the application's customer, crew, and admin surfaces as of April 2026. Use this as a markup sheet: circle what to keep, cross out what to retire, and add notes for what is missing.

A. Three Audiences, Three Apps (one codebase)

Audience	Bottom-tab home	Where they do work
Customer	/ or /hub	Booking, wallet, rewards, mining, jobs
Crew / Worker	/crew	Today, Jobs, Schedule, Earnings
Admin	/admin	Overview, Jobs, People, Finance, Pricing, etc.

B. Customer Booking Surfaces (where the inconsistency lives)

There are 8 different ways a customer can start a job. They overlap heavily.

#	Route	What it is	Services covered	Flow style
1	/ Homepage	Service tiles	All 14	Sends to /book?service=X
2	/hub	Customer hub	All 14	Embeds the chatbot
3	/book	Multi-service cart wizard	All 14	Step-by-step form
4	/book/chat	Dedicated chatbot page	All 14	Conversational
5	/book/lawn-care	Lawn-care 3-step wizard	Lawn only	Form
6	/post-job	Post a Job, Step 1 of 3	Only 10 of 14	Form + packages
7	/packages	JC222 / JC272 picker	Moving + Junk	Package list
8	Service landing pages	One page per service	Lawn, Window, Cleaning, Roofing, Demo, Snow, Trash Valet	Each one different

Problems this creates:

- Click 'Moving' on / can land you in /book, /book/chat, /packages, OR /post-job depending on entry.
- Worker 'Add a Job' buttons send them into the customer /post-job flow that is missing 4 services.
- The chatbot exists and works, but is bypassed entirely on /post-job and /packages.
- Each service landing page hands off to a different next-step (sometimes chatbot, sometimes its own form).
- Your handwritten 'Click a service -> asked to click a service AGAIN' complaint = the /post-job Step 1 -> Step 2 service pivot.

C. The 14 Services & Which Flow Owns Them Today

Service	Key	Today's flow	Pkg pricing?	Chatbot?	Landing page?
Moving	residential	Packages on /post-job	Yes - JC222, JC272, Heavy Item	Yes - full intake	-
Junk Removal	junk	Packages on /post-job	Yes - Tier 1-4	Yes - full intake	-

Snow Removal	snow	Form	Yes - \$50/visit, \$2,500/yr	Yes - quote-only	/snow-removal
Handyman	handyman	Form	From \$150	Yes - quote-only	-
Flooring	flooring	Form	-	Yes - quote-only	-
Painting	painting	Form	-	Yes - quote-only	-
Lawn Care	lawn_care	Dedicated wizard	From \$50	Yes - quote-only	/lawn-care
Window Cleaning	window_cleaning	Landing -> chatbot	\$5/pane, \$20 min	Yes - full intake	/window-cleaning
Trash Valet	trash_valet	Dedicated wizard	\$30/mo, \$6 first can	Yes - full intake	/trash-valet
Move Cleaning	cleaning	MISSING on /post-job	\$300+, deep \$500+	Yes - quote-only	/cleaning
Demolition	demolition	MISSING on /post-job	-	Yes - quote-only	/demolition
Roofing	roofing	MISSING on /post-job	-	Yes - quote-only	/roofing
Labor Only	labor	MISSING on /post-job	\$75/hr, 2hr min	-	-
Something Else	custom	Form	-	Yes - quote-only	-

D. Pricing - Where It Lives

Where	What's there
client/src/pages/pricing.tsx	Customer-facing rate sheet (Junk tiers, Lawn, Windows, Trash Valet, etc.)
client/src/pages/service-packages.tsx	JC222 / JC272 / Heavy Item / Oversized / 2 Movers x N hrs grid
attached_assets/pricing_*.ts	Labor \$75/hr, Truck \$300/\$600 - referenced in places
client/src/pages/post-job.tsx	PACKAGE_SERVICES hardcoded list (Moving + Junk only get packages here)
booking-chatbot.tsx	Inline pricing logic for the 5 instant-quote services

There is no single source of truth for pricing. Your handwritten notes (the moving matrix by bedroom x stairs x load type, junk tiers Tiny -> X-Large -> Custom, snow \$50 / \$2,500/yr / \$3,800 w-rod, windows by pane size) do not live anywhere in code yet.

E. Worker Side - How a Crew Member Books or Adds Work

Where	Button	Goes to
/crew (Today)	Claim daily reward	/mining (was broken, now fixed)
/crew/jobs	Add Lead	/post-job (customer flow, missing 4 services)
/employee-home	Add a Job	/post-job (wrong)
/employee-dashboard	Add a Job	/post-job (wrong)

/hub	Add a Job	/post-job (wrong)
/employee/add-job	(no button points here)	Dedicated worker job-entry flow - exists but ORPHANED

F. The 'Uniform Autonomous System' Gap

Your concern about 'multiple inconsistent landing pages trying to separately do the work of a system that I want to uniformly and autonomously run' translates to these concrete gaps:

- No single quoting brain. Pricing rules live in 5+ files. Chatbot, packages page, pricing page, and your handwritten matrix are all separate.
- No single entry point. /, /hub, /book, /book/chat, /post-job, /packages, and 7 service landing pages all do overlapping work.
- Worker tools borrow the customer flow. /post-job is used by both audiences but is incomplete for both.
- The chatbot you already built is underused. It is wired to /book/chat, /hub, and 4 of 14 service landing pages - but Moving and Junk (highest volume) bypass it.
- Pricing display is not the pricing engine. /pricing shows numbers, but those numbers are not what gets used to actually quote a job.

G. Decisions I Need From You

Mark these up and send them back. I will turn your edits into a concrete task list.

1. One booking front door, or many?

Should every 'Get a quote' button anywhere in the app land on the same flow (likely the chatbot), or should some services keep their dedicated landing pages?

2. Packages or dynamic quoting for Moving / Junk?

Keep JC222 / JC272 as the customer experience, replace with the weight-tier engine from your ChatGPT notes, or offer both?

3. One pricing source of truth?

Should pricing (your handwritten matrix included) be consolidated into a single module that the chatbot, packages, /pricing, and admin override panel all read from?

4. Worker job-entry split.

Should the orphaned /employee/add-job become the worker default, or do we delete it and just fix /post-job to serve both audiences?

5. Service catalog completeness.

Are all 14 services in services.ts actually services you offer - or should some get retired so the catalog matches reality?
